

Stochastic Processes

Continuous Assessment 3 (a.k.a. Problem Sheet 3)

Arnaud Lionnet

See the Canvas page for information about this Continuous Assessment (notably, the submission deadline).

Throughout this Continuous Assessment, whenever asked to compute quantities, you are required to provide a literal formula first, and then a numerical value.

Question 1. [15]

Let $B = (B_t)_{t \in \mathbb{R}_+}$ be a stochastic process on \mathbb{R}_+ , valued in \mathbb{R} .

- (a) State the definition of a Brownian motion. [5]
- (b) Give the characterisation of the Brownian motion as a Gaussian process. [5]
- (c) Give the characterisation of the Brownian motion as a martingale. [5]

Question 2. [25]

Let $\alpha > 0$, and let B^1, B^2 be two independent Brownian motions.

Show that $W = \alpha B^1 + \sqrt{1 - \alpha^2} B^2$ is a Brownian motion. [25]

Question 3. [60]

Let $X_0, a \in \mathbb{R}$, $b, T \in \mathbb{R}_+^*$ and let W be a Brownian motion. The process X is defined by,

$$\text{for all } t \in \mathbb{R}_+, X_t = X_0 + at + bW_t.$$

For parts (a), (b), (c), use $X_0 = 100$, $a = -15$, $b = 3$, $T = 4$. Round your answers to 2 decimal places.

- (a) Compute $\mathbb{E}[X_T]$. [10]
- (b) Compute $\text{Var}[X_T]$. [10]
- (c) Compute $\mathbb{P}(X_T \in [L, U])$, with $L = 30$, $U = 35$. [10]
- (d) Determine the p.d.f. of X_t , for $t \in \mathbb{R}$. [10]
- (e) Is X a Gaussian process ? [10]
- (f) Determine the necessary and sufficient condition on the parameters X_0, a, b for X to be a martingale. [10]
